

Richman Osasuyi

AI-Native Full-Stack Builder

Portfolio: richmandev.vercel.app | GitHub: [DtonGamer](https://github.com/DtonGamer)

Live: ragnote.vercel.app · tonstores.vercel.app

Email: wally.aiofm@gmail.com | Location: Benin City, Nigeria

Availability: Immediate — flexible schedule for 2–3 hour recorded sessions

AI CODING WORKFLOW

- **Terminal-Based Agents:** OpenCode (GLM models), Qwen Code, Claude Code
 - **IDE Tools:** Cursor (UI/UX iterations)
 - **Model Strategy:** Switch between GLM (open-weight), Qwen Coder, and Claude based on task complexity — larger context for architecture, faster models for implementation
 - **Environment:** Windows (WSL2), Docker, PM2, Supabase CLI, Git, Bitcoin Core RPC, Redis
 - **Workflow Evolution:** Migrated from Supabase SQL Editor to direct Supabase CLI in terminal to optimize AI agent workflows
-

PRODUCTION PROJECTS

RagNote — AI Study Assistant (React/TypeScript, Python, Supabase)

Live: ragnote.vercel.app | Code: github.com/DtonGamer/Ragbook | Built with Qwen Code

- Architected production RAG system with asynchronous Python workers, OCR pipelines (OCRmyPDF), and pgvector semantic search
- Implemented credit-based monetization with Paystack, Supabase Edge Functions, and Redis job queues
- Tech: HuggingFace BGE embeddings, Docker, Supabase Realtime, Tailwind CSS

PDF Processing Worker — High-Performance Document Pipeline (Python)

Code: github.com/DtonGamer/pdf_worker | Built with Qwen Code

- Developed memory-efficient worker (400–650MB footprint) for PDF/image OCR, chunking, and embedding generation
- Implemented priority queue system (high/normal/low) with exponential backoff retry logic
- Built HTTP health endpoints and metrics monitoring for production deployment on free-tier platforms (Railway, Render, Zeabur)
- Tech: Python 3.11, Tesseract OCR, sentence-transformers, Redis, Docker

Tonstores Catalog Hub — E-Commerce Platform (React/TypeScript, Supabase)

Live: tonstores.vercel.app | Code: github.com/DtonGamer/Tonstores | Built with Qwen Code + Cursor

- Full-stack catalog management with guest checkout, KYC onboarding, and Paystack subaccount automation
- Migrated payment providers (Monnify → Paystack) across 12+ Supabase Edge Functions using AI-assisted refactoring
- Admin role system with Row Level Security (RLS) policies and social media sales tracking

DMT Pattern Hunter — Bitcoin Blockchain Analytics (Node.js, Trac Network)

Code: github.com/DtonGamer/DMT-Pattern-Hunter | Built with OpenCode (open-source) + GLM models

- Developed Bitcoin block scanner analyzing 38 on-chain data fields for pattern discovery and NAT token deployment
 - Built terminal UI with Node.js, integrated blockchain.info API with Bitcoin Core RPC fallback, and PM2-managed Discord bot
 - Implemented reputation system, rate limiting, and TAP Protocol inscription generation
 - Direct OpenCode experience: Used open-source terminal assistant with GLM (open-weight models) for smart contract logic and RPC integration
-

TECHNICAL SKILLS

AI-Native Development: Terminal-based agentic coding (OpenCode, Qwen Code), model switching strategies (GLM/Qwen/Claude), prompt engineering for system architecture, one-chat-per-task methodology

Frontend: React 18, TypeScript, Vite, Tailwind CSS, shadcn/ui

Backend: Supabase (PostgreSQL, pgvector, Edge Functions, Realtime), Python (sentence-transformers, OCRmyPDF), Node.js

Infrastructure: Docker, Docker Compose, PM2, Redis, Supabase CLI, Git, Vercel, Railway/Render deployment

Blockchain: Bitcoin Core RPC, TAP Protocol, Trac Network integration
